DATA FLOW DIAGRAM

TEAM ID	LTVIP2025TMID30796
PROJECT NAME	Optimizing Idee, Group, And Role Management With Access Control And Workflows

A data flow diagram (DFD) for optimizing user group and role management with access control and workflows would visually represent how user data, roles, and permissions flow through a system to enforce access restrictions and manage tasks. It would illustrate the processes involved in user registration, role assignment, access control enforcement, and workflow initiation based on user role
